DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-6,10,11 and 16-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Pease et al (PN 6,304,586).

In figure 4 Pease et al illustrates a tunable laser having a reflector (350), a diffraction grating (340), a laser diode assembly (330) and actuator (370) to provide displacement of the reflector (350). Where the laser cavity is tuned within a wavelength range of 1525-1575 nm.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pease et al (PN 6,304,586) as applied to claim 1 above, and further in view of Ohnstein et al (PN 5,929,542).

Pease et al discloses in column 7 a stepper motor as the actuator for the tunable laser, which provides displacement to the reflector.

Pease et al fails to disclose the actuator as a micro-machined.

Ohnstein et al discloses the use of micro-machine stepper motors for precise displacement.

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to apply the teaching of Ohnstein and use a similar stepper motor in the laser system of Pease et al because it would provide for precise displacement of the reflector thereby obtaining precise tuning of the laser system.

Allowable Subject Matter

Claim 12 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: None of the prior art alone or in combination discloses the structural combination of the laser system leading up to dependent claim 12 where a Fabry-Perot applied as the source.

Claims 13-15 are allowed.

The following is an examiner's statement of reasons for allowance: None of the prior arts alone or in combination disclose the structural combination of independent claim 13 in particular the micro-actuator having rotary comb drive.
